Note: YTD comparisons are based on statistical weeks. Statistical weeks between years do not align with calendar dates. Data are subject to revision.

Source: Alaska Department of Fish & Game. *Chinook figures exclude harvest before week 20.

- Alaska commercial salmon harvest has reached 50% of the projected annual total, over 106 million fish. As the sockeye harvest season closes, harvest effort now shifts to pink and keta fisheries.
- About 15 million pink salmon were harvested in statistical week 31. The increase in weekly volume puts harvests back on the expected upward trajectory following a dip in week 30 production. Total harvest remains 33% below 2023 levels.
- Keta harvests peaked in week 28, following the timing of past seasons. Statewide harvest has exceeded the five-year average thus far in 2025.
- Coho harvests are 36% above 2024 levels, and on par with the five-year average. Coho harvests typically peak around statistical week 35, and results in these early weeks indicate annual harvest will meet the projection of 2.4 million fish.
- Projected chinook salmon harvests have declined for several years. Statistical week 31 harvest is 61% below 2024. Following this decline, regulatory actions have been taken to help further manage chinook populations, leading to lower volume harvests in many regions.

2025 Harvest vs. Projection (Thousands of Fish)

	Harvest	Annual Projection	% Realized
Sockeye	50,486	52,932	95%
Pink	42,610	138,382	31%
Keta	12,962	20,818	62%
Coho	591	2,356	25%
Chinook	101	144	70%
Total	106,750	214,632	50%
